The Product Development Factory_

What AI changes about how we build

Saadiq Rodgers-King

saadiq.xyz

// THE GAP

99%

adoption. and most people
were **still stuck.**

Driving a Ferrari with the handbrake on. The teams
pulling away didn't get different AI. They changed
the shape of the work.

SOURCE — RAMP / SEB GODDIJN

Orchestration and enablement have always been product's real work. When execution gets cheap, that becomes *the whole job*.

ACT 01

The factory

The future scenario.

// TODAY

A pipeline. Hand-offs, and weeks between the stages.

// THE FACTORY

The loop closes. Each rotation takes *days*, not quarters.

ACT 02

How the best teams operate now

Receipts from outside the building.

Quality went *up*, not down.

2×

R&D output in nine months. 3× at sixteen.

93.6%

of pull requests agent-driven.

−35%

downtime from breaking changes, while deploys doubled.

SOURCE — DARRAGH CURRAN, INTERCOM / FIN.AI

18×

A 231-person-day migration,
shipped in 13 days.

+151% effective output. Incidents down as
volume rose.

The benchmark: top-decile builders 5×. The 10×
tier includes decades-old monorepos and legacy
businesses you'd presume never could.

// HOW TEAMS SHARE

team-os/

.claude/ # shared commands, skills

product/ # PRDs, customer notes

team/ # onboarding, retros

"The feature isn't rolled out until the repository is updated."

One PM supports twenty. The shared model of the problem is the asset, not the app.

// WORKDAY PREP

● LIVE

\$ /today

> reading calendar, inbox, meeting notes, CRM...

3 meetings. Kantar sync at 7:15.

Due today: send Ty the outline.

2 follow-ups waiting on you._

It assembles the brief. *I make the calls.*

// ENABLING THE BUILDERS

1,300

agent pull requests per week.

STRIPE

423

security fixes in a month, vs a
20–30 baseline.

MOZILLA

19.2%

of PRs auto-merged, no human
reviewer.

INTERCOM

The bottleneck moved from **writing** code to **verifying** it. CI and the verification loop are the new ceiling, and that's shared infrastructure to orchestrate.

The task may change.
The people *don't*.

Ownership doesn't move.

If anyone can generate the PRD, the PRD was never the job.

What's left is judgment, taste, and owning the outcome. That was always the point. The tasks that crowded it out are the part that's receding.
